

CLEAN COPY OF CLAIMS

1. A method of generating optical emissions from metallic point sources, comprising the steps of:

forming micron-size droplets having individual droplet diameters of approximately 10 micrometers to approximately 100 micrometers, each containing nano-size particles, each nano-size particle ranging in size from approximately 5nm to approximately 100nm;

passing the droplets into individual target sources;

irradiating the individual target sources with a laser beam having substantially identical diameter to each of the individual droplets; and

producing optical emissions from the irradiated target sources, wherein the steps of forming, passing, irradiating and producing occur at room temperature.

- 2. The method of claim 1, wherein the droplets include: nano particles of metals in a liquid.
- The method of claim 2, wherein the liquid is selected from at least one of:
 H2O, oil, oleates, soapy solutions, and alcohol.
- 4. The method of claim 2, wherein the droplets include:
 Tin(Sn) nano-particles in the liquid.
- The method of claim 2, wherein the droplets include:Copper(Cu) nano-particles in the liquid.
- 6. The method of claim 2, wherein the droplets include: Zinc(Zn) nano-particles in the liquid.

ĴĽ

- 7. The method of claim 2, wherein the droplets include: Gold(Au) nano-particles in the liquid.
- 8. The method of claim 2, wherein the droplets include:
 Aluminum(Al) nano-particles in the liquid.
- 9. The method of claim 2, wherein the droplets include:
 Bismuth(Bi) nano-particles in the liquid.
- 10. The method of claim 1, wherein the room temperature includes: approximately 10 degrees to approximately 30 degrees C.
- 11. The method of claim 1, wherein the optical emissions include: EUV emissions.
- 12. The method of claim 1, wherein the optical emissions include: XUV emissions.
- 13. The method of claim 1, wherein the optical emissions include: X-ray emissions.
- 14. The method of claim 1, wherein the optical emissions include: wavelengths of approximately 11.7 nm.
- 15. The method of claim 1, wherein the optical emissions include: wavelengths of approximately 13 nm.

(L

- 16. The method of claim 1, wherein the optical emissions include: wavelength ranges of approximately 0.1 nm to approximately 100 nm.
- 17. The method of claim 1, wherein the optical emissions include: wavelength ranges of approximately 0.5 nm to approximately 1.5 nm.
- 18. The method of claim 1, wherein the optical emissions include: wavelength ranges of approximately 2.3 nm to approximately 4.5 nm.
- 19. An apparatus for generating optical emissions from metallic point sources, comprising: means for forming micron-size droplets having individual droplet diameters of approximately 10 micrometers to approximately 100 micrometers, each containing nano-size particles, each nano-size particle ranging in size from approximately 5nm to approximately 100nm;

means for feeding the droplets into a target path of individual target sources;

means for irradiating the individual target sources with a laser beam; and

means for generating optical emissions from the irradiated target sources, wherein the

steps of forming, passing, irradiating and producing occur at room temperature.

- The apparatus of claim 19, wherein the laser beam includes:a substantially identical diameter to each of the individual droplets.
- 21. The apparatus of claim 19, wherein the droplets include: nano particles of metals in a liquid.
- 22. The apparatus of claim 19, wherein the liquid is selected from at least one of: H2O, oil, oleates, soapy solutions, and alcohol.

a

- 23. The apparatus of claim 19, wherein the droplets include: Tin(Sn) nano-particles in the liquid.
- 24. The apparatus of claim 19, wherein the droplets include:

 Copper(Cu) nano-particles in the liquid.
- 25. The apparatus of claim 19, wherein the droplets include: Zinc(Zn) nano-particles in the liquid.
- The apparatus of claim 19, wherein the droplets include:Gold(Au) nano-particles in the liquid.
- 27. The apparatus of claim 19, wherein the droplets include:
 Aluminum(Al) nano-particles in the liquid.
- 28. The apparatus of claim 19, wherein the droplets include:
 Bismuth(Bi) nano-particles in the liquid.
